

Company Overview –

With over fifteen years of experience in the aircraft dry-wash industry, Pristine Fleet Inc currently provides wash programs for Alaska Airlines and Hawaiian Airlines, servicing collectively 285 aircraft between our Los Angeles International Airport (KLAX) and San Diego International Airport (KSAN) stations.

With the advantage of highly experienced crew members and extensive safety protocols in place, clients can count on every service being performed safely and efficiently. In our decade of service, we have maintained an exemplary safety record with zero delays.

We only use the best products available. Boeing and Airbus approved, our primary dry wash product has compounds that leave a UV protective coating that protects and extends paint life. Maintaining the correct wash program is proven to prevent corrosion.

Providing an exceptional service remains our priority, and transparency in operations is essential in maintaining these standards. Pristine Fleet provides proprietary, web-based software to track and verify every wash performed. F.A.S.T. (Fleet Appearance Solutions Tracking) gives our clients access to before and after images by zone, wash details, as well as an overview of the wash status of your fleet.

F.A.S.T. is continuously evolving to better meet the needs of our operation and clients.

Contact us to learn more about our federal contracting abilities.

Core Competencies –

Aircraft Corrosion Control & Dry Wash

Differentiators –

- 15+ years of industry experience
- Minority woman-owned
- Highly trained crews that operate successfully around maintenance
- Utilize the highest quality Boeing and Airbus approved products
- A comprehensive fleet cleaning program can reduce drag and increases fuel efficiency
- Long-term and highly experienced employees with low turnover rates
- Fleet Appearance Solutions Tracking software (F.A.S.T.) tracks all wash events in real-time
- Station locations in (KLAX) Los Angeles International Airport and (KSAN) San Diego International Airport
- Capable of completing a dry-wash on narrow-body and wide-body aircraft
- Ability to commit the appropriate resources to the appropriate programs to ensure time frames are met without compromising quality
- Company-owned equipment, supplies, and vehicles
- Outstanding safety record

Past Performance –

Alaska Airlines - responsible for Alaska Airlines dry-wash program encompassing 245 aircraft. Their fleet consists of Boeing 737's and Airbus A319s, A320s, A321s - ongoing since 2010

Hawaiian Airlines - responsible for Hawaiian Airlines dry-wash program of 50 Airbus aircraft including A321s & A330s - ongoing since 2010
